

RESUME BUILDER

PROJECT BY- HARSH MEHROTRA

Project Objective

The objective of this project is to develop a user-friendly web application that enables individuals to create personalized resumes easily

Modules

- 1- User Input
- 2- Resume Preview
- 3- Download
- 4- Validation and Error Handling

1] User Input

Purpose:

To gather personal details from users required resume creation.

Functionality:

- Allows users to input and update their details.
- Stores data temporarily for use in the resume preview

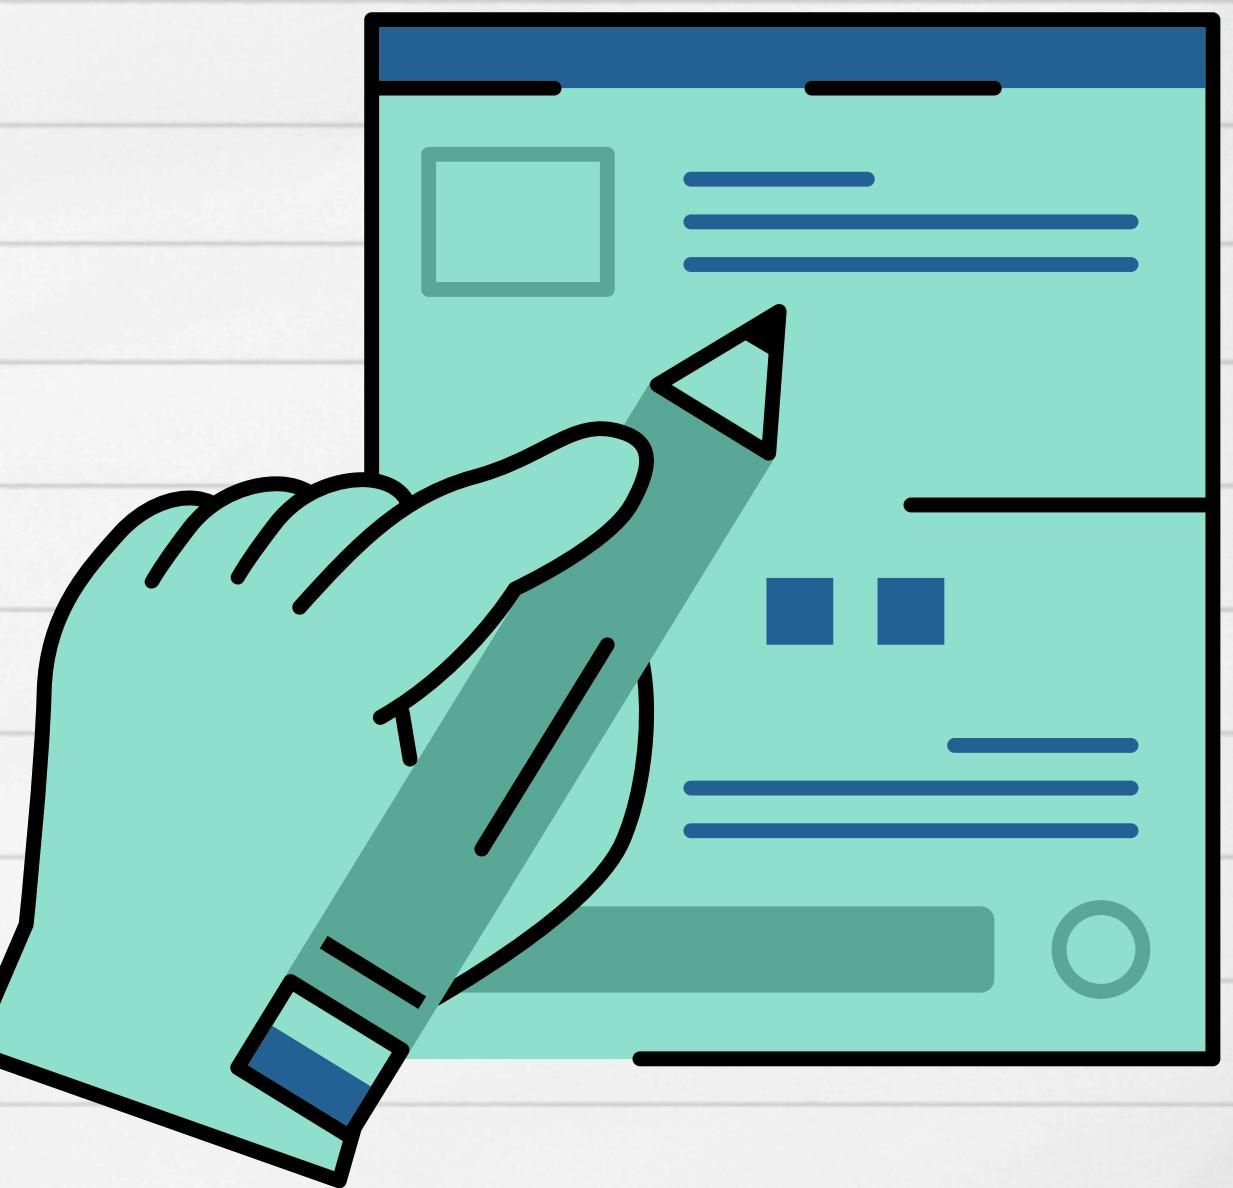

2) Resume Preview

Purpose:

To display a real-time preview of the user's resume.

Functionality:

- Renders user input into a structured format (name, contact details, skills, etc.).
- Updates automatically when the user changes their input or selects a different template

3) Download

Purpose:

To enable users to download their customized resume as a PDF.

Functionality:

- Converts the resume preview into a downloadable PDF format.
- Allows users to save their resumes for professional use.

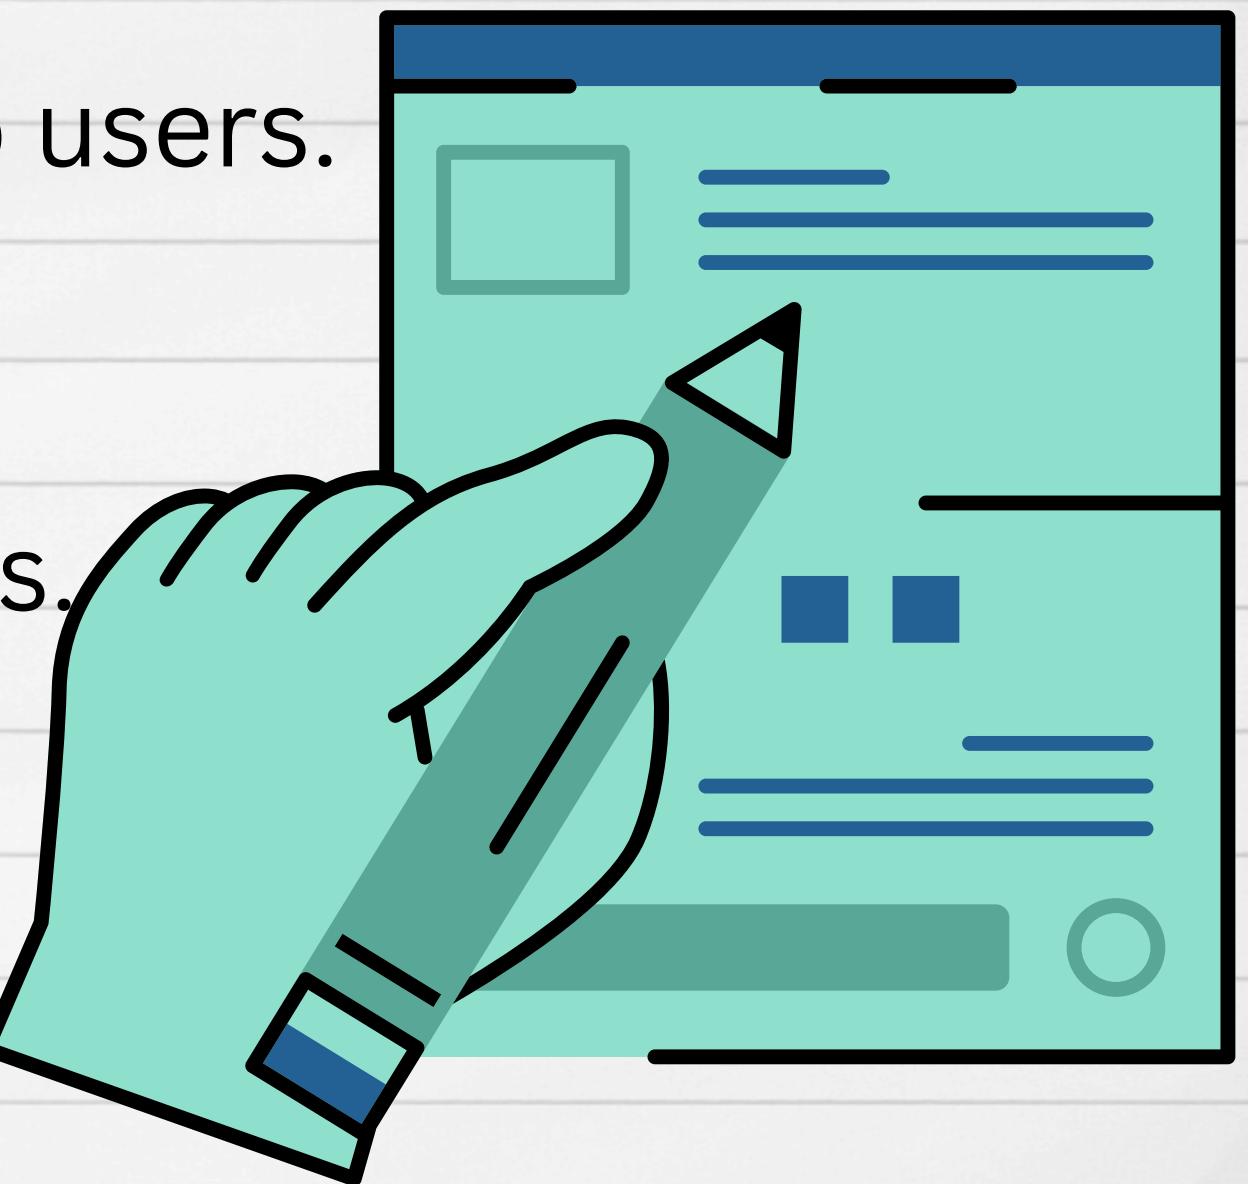

4] Validation and Error Handling

Purpose:

To ensure data integrity and provide feedback to users.

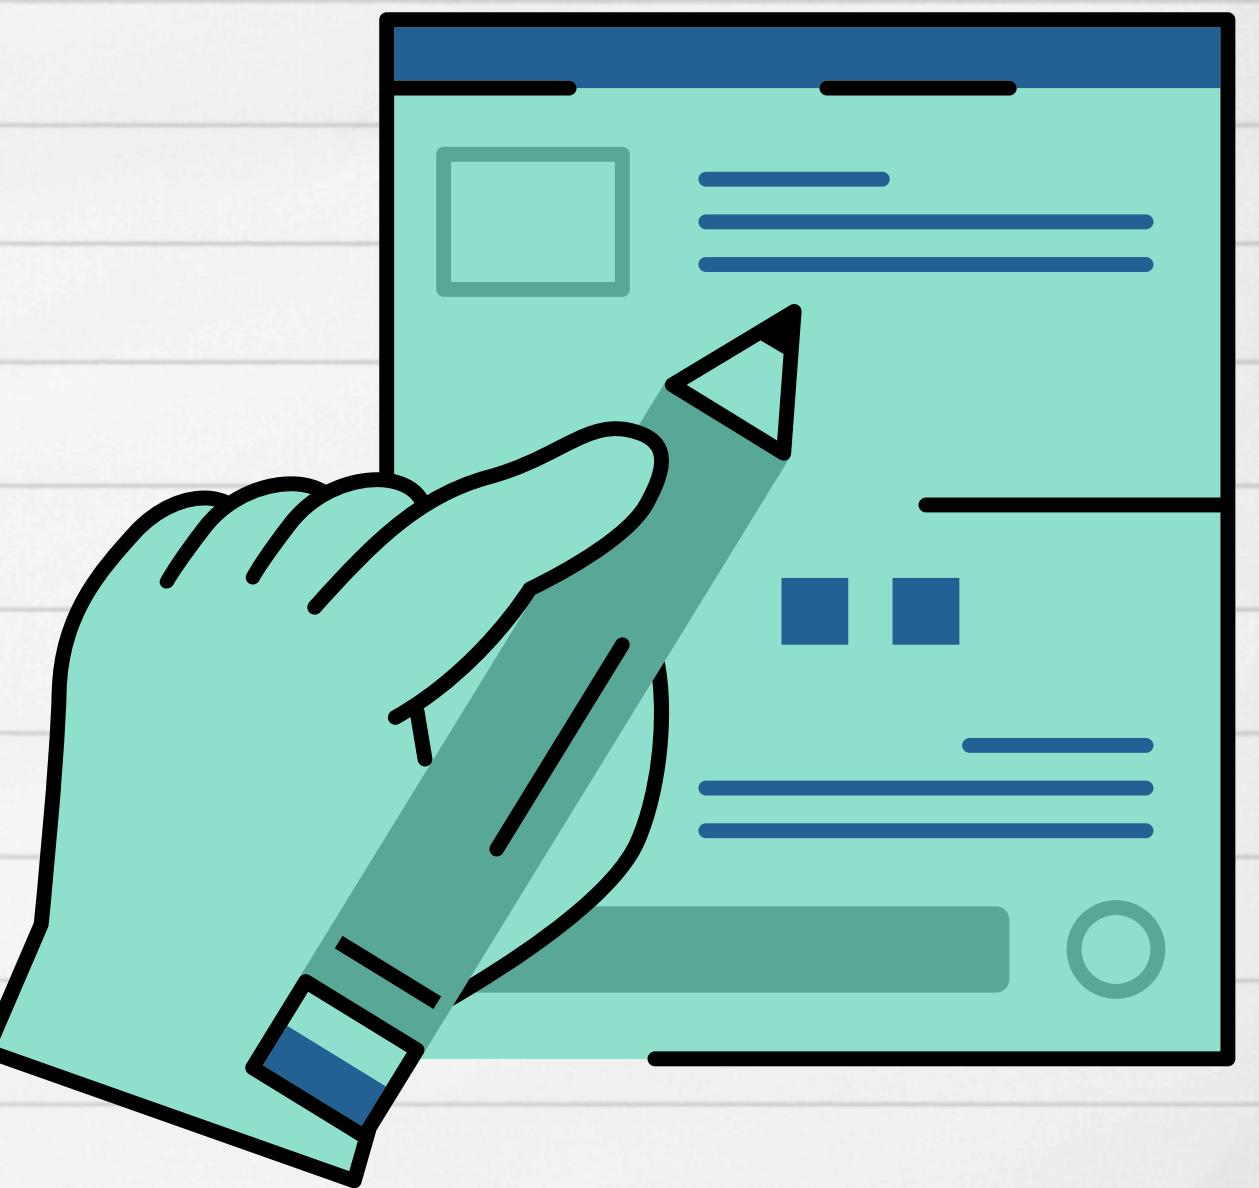

Functionality:

- Prevents incomplete or incorrect submissions.
- Guides users to correct their input before proceeding.

Hardware requirements

- 1- Computer/laptop
- 2- Memory (RAM)
- 3- Internet Connection

Software Requirements

1- Web browser

2- Text Editor

3- Web Development Technologies:-

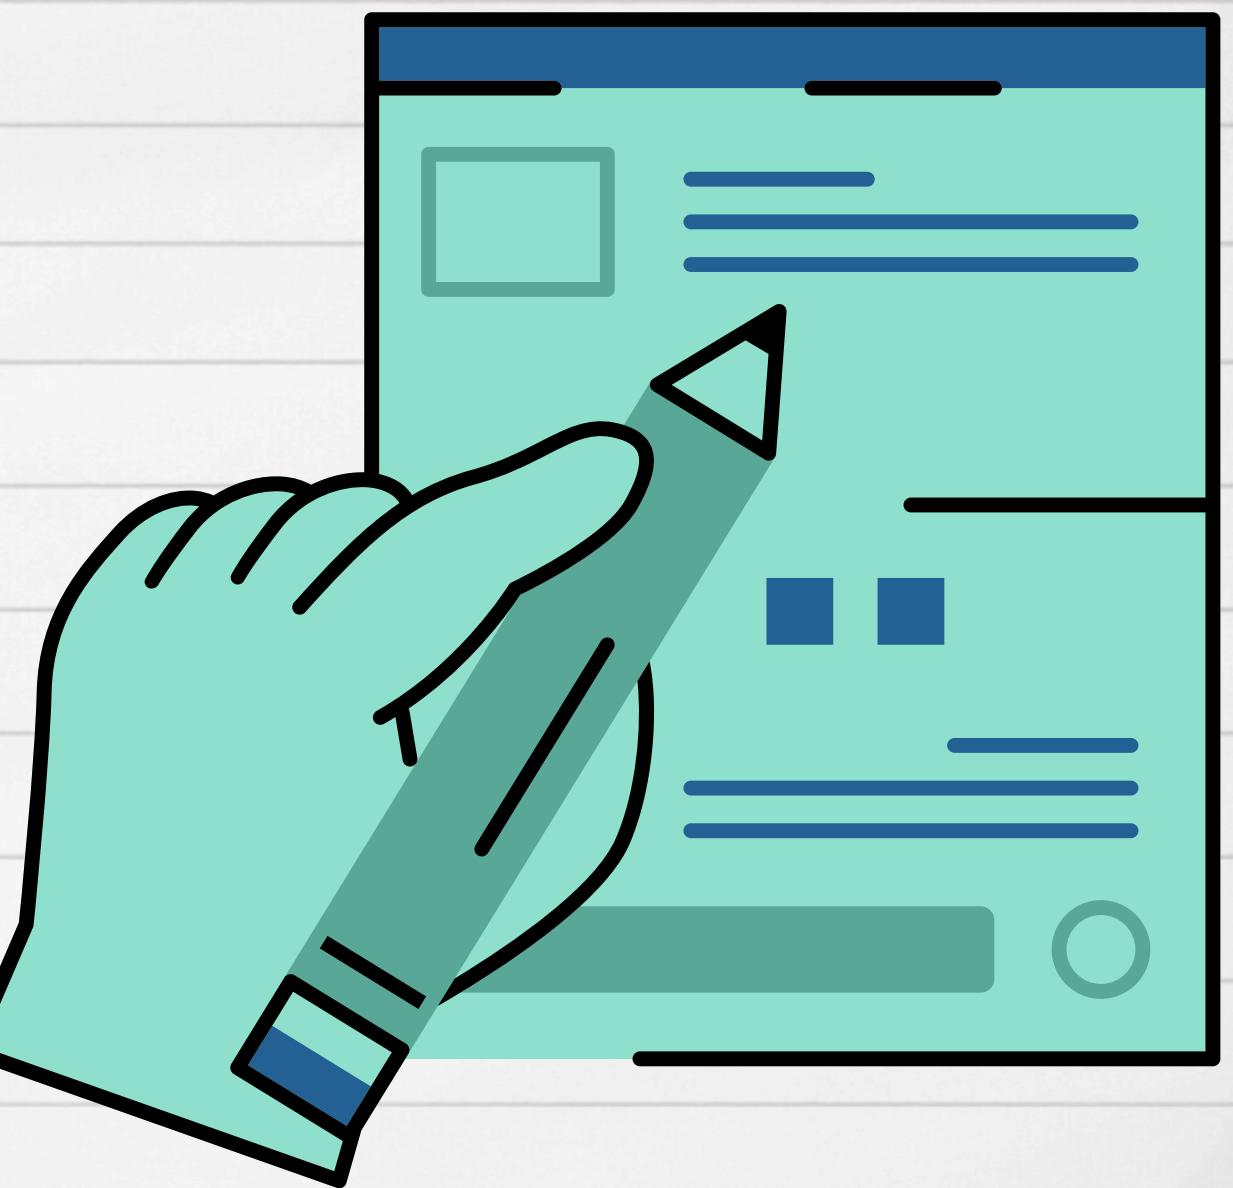

- * HTML

- * CSS

- * Javascript

4- Libraries:-

- * html2pdf.js

**THANK
YOU VERY
MUCH!**
